

INFRARED GAS ANALYZER

DATA SHEET

ZRJ

This gas analyzer (ZRJ) is capable of measuring the concentrations of CO₂, CO, CH₄, SO₂ and O₂ components in sample gas.

CO₂, CO, CH₄ and SO₂ are measured by non-dispersion infrared method (NDIR), while O₂ is measured by paramagnetic or zirconia method. A maximum of 4 components including O₂ (max. 3 components except for O₂ measurement) are simultaneously measurable.

A high-sensitivity mass flow sensor is adopted in the detection block for the infrared method. Due to use of single beam system for measurement, maintenance is easy and an excellent stability is ensured for a long period of time. In addition, a microprocessor is built in and a large-size liquid crystal display is equipped for easier operation, higher accuracy and more functions.

This analyzer is thus optimum for combustion control of various industrial furnaces, botanical study and global atmospheric research.

FEATURES

1. Simultaneous measurement of 4 components including O₂
A maximum of 4 components are simultaneously measurable; O₂ and three components selected from among CO₂, CO, CH₄ and SO₂.
Measured values can be indicated through signal input from an externally installed O₂ analyzer.
2. Excellent in long-term stability
The original optics (measurement block) minimizes drift particularly due to contamination of a measuring cell, so an excellent stability is ensured for a long period of time.
3. Subdued interference from other gas components
Interference from other gas components is insignificant, because the detector is a serial dual-layer type transmission detector.
4. Easy maintenance
Because of single-beam system the measurement block is simple with no need for optical balance adjustment. Therefore, maintenance is easy.
5. Easy to operate
Operation can be carried out smoothly in an interactive way through a large-size liquid crystal display.
6. Abundant functions
 - Zero point and span can be accurately calibrated just by pressing the calibration keys.
Further, the analyzer is settable so as to carry out automatic calibration periodically.
 - An error will be detected by self-diagnostic function and indicated by error message.
 - Besides, a rich variety of functions are provided including remote range input, range discrimination signal output, output signal holding and upper/lower limit alarm.

SPECIFICATIONS

Standard Specifications

Principle of measurement:

CO₂, CO, CH₄, SO₂;

Non-dispersion infrared-ray absorption method

Single light source and single beam (single beam system)

O₂ ; Paramagnetic method (O₂ sensor built in) or zirconia sensor method (O₂ sensor externally installed)

Measurable gas components and measuring range:

	Minimum range	Maximum range
CO ₂	0 – 500ppm	0 – 100vol%
CO	0 – 200ppm	0 – 100vol%
CH ₄	0 – 1000ppm	0 – 100vol%
SO ₂	0 – 1000ppm	0 – 5000ppm
O ₂ (built in)	0 – 5vol%	0 – 100vol%
O ₂ (External Zirconia)	0 – 5vol%	0 – 25vol%

- Max. 4 components measurement including O₂.
- 1 or 2 measuring range per component.
- Measuring range ratio ≤ 1:5 (except built in O₂)
≤ 1:20 (built in O₂)

Max.4 components and 2 ranges are selectable including an O₂ measurement. For measurable components and possible combinations of measuring ranges, refer to Tables 1 to 6.

Measured value indication:

- Digital indication in 4 digits
(LCD with CFL back light)
- Instantaneous value of each component
- Instantaneous value after O₂ correction
(only in CO, SO₂ measurement with O₂)
- Average value after O₂ correction
(only in CO, SO₂ measurement with O₂)
- O₂ average value

Analog output signals:

- 4 to 20mA DC or 0 to 1V DC, non-isolated output.
- Analog output corresponds to measured value indication in 1:1.
- Permissible load; 550Ω max.
for 4 to 20 mA
DC100kΩ min. for 0 to 1V DC
- * Refer to Table 7, for the channel No. of displayed values and analog output signals.

Analog input signal:

- For signal input from externally installed O₂ sensor.
- Signal requirement;
 - (1) Signal from Fuji's Zirconia O₂ sensor (TYPE: ZFK7)
 - (2) 0 to 1V DC from an O₂ sensor
- Input section is not isolated. This feature is effective when an O₂ sensor is not built in.
- * Externally installed O₂ sensor should be purchased separately.

Relay contact output:

- 1a contact (250V AC/2A, resistive load)
Instrument error, calibration error, range discrimination, auto calibration status, solenoid valve drive for auto calibration, pump ON/OFF.
- 1c contact (250V AC/2A, resistive load)
Upper/lower alarm contact output.
Peak count alarm contact output.
- * All relay contacts are isolated mutually and from the internal circuit.

Contact input:

- Non-voltage contact (ON/OV, OFF/5V DC, 5mA flowing at ON)
Remote range changeover, auto calibration remote start, remote holding, average value resetting
- Isolated from the internal circuit with a photocoupler. Contact inputs are not isolated from one another.

*Only M3.5 screw terminals are used for all signal inputs and outputs.

Power supply:

- Voltage rating ; 100V to 240V AC
- Allowable range; 85V to 264V AC
- Frequency ; 50Hz/60Hz
- Power consumption; 70VA max.
- Inlet ; Conform to EN60320
Protection Class I

Operating conditions:

- Ambient temperature; -5°C to 45°C
- Ambient humidity ; 90% RH max.,
non-condensing

Storage conditions:

- Ambient temperature; -20°C to 60°C
- Ambient humidity ; 100% RH max.,
non-condensing

Dimensions (H x W x D):

- 19-inch rack mounting type;
177 x 483 x 493mm
- Desk-top type; 194 x 483 x 493mm

Mass:

- Approx. 10 kg

Finish color:

- Front panel; Off-white (Munsell 10Y7.5/0.5 or equivalent)
- Casing; Steel-blue

Enclosure:

- Steel casing, for indoor use

Material of gas-contacting parts:

- Gas inlet/outlet; SUS304
- Sample cell; SUS304/neoprene rubber
- Infrared-ray transmitting window; CaF₂
- Internal tubing; Toaron tube

Gas inlet/outlet:

- Rc1/4 or NPT1/4 internal thread

Purge gas flow rate:

- 1L/min (when required)

Standard Functions

Output signal holding:

- Output signals are held during manual and auto calibrations by activation of holding (turning on its setting).
- The values to be held are the ones just before start calibration mode.
- Indication values will not be held.

Remote output holding:

- Output signal is held at the latest value by short-circuiting the remote output holding input terminals.
- Holding is maintained while the terminals are short-circuited. Indication values will not be held.

Remote range changeover:

- Measuring range can be changed according to an external signal when remote range changeover input is received.
- Changeover is effective only when remote range setting is turned on. In this case, measuring range cannot be changed manually.
- When the contact input terminals for each component are short-circuited, the first range is selected, and it is changed over to the second range when the terminals are open.

Range identification signal:

- The present measuring range is identified by a contact signal.
- The contact output terminals for each component are short-circuited when the first range is selected, and when the second range is selected, the terminals are open.

Auto calibration:

- Auto calibration is carried out periodically at the preset cycle.
- When a standard gas cylinder for calibration and a solenoid valve for opening/closing the gas flow line are prepared externally by the customer, calibration will be carried out with the solenoid valve drive contacts for zero calibration and each span calibration turned on/off sequentially at the set auto calibration timing.

Auto calibration cycle setting:

Auto calibration cycle is set.
Setting is variable within 1 to 99 hours (in increments of 1 hour) or 1 to 40 days (in increments of 1 day).

Gas flow time setting:

The time for flowing each calibration gas in auto calibration is set.
Settable within 60 to 599 seconds (in increments of 1 second)

Auto calibration remote start:

Auto calibration is carried out only once according to an external input signal. Calibration sequence is settable in the same way as the cyclic auto calibration.
Calibration starts by opening the auto calibration remote start input terminals after short-circuiting for 1.5 seconds or longer. Auto calibration is started when the contacts open.

Auto zero calibration:

Auto zero calibration is carried out periodically at the preset cycle.
This cycle is independent on "Auto calibration" cycle.
When zero calibration gas and solenoid valve for opening/closing the calibration gas flow line are prepared externally by the customer, zero calibration will be carried out with the solenoid valve drive contact for zero calibration turned on/off at the set auto zero calibration timing.

Auto zero calibration cycle setting:

Auto zero calibration cycle is set.
Setting is variable within 1 to 99 hours (in increments of 1 hour) or setting is variable within 1 to 40 days (in increments of 1 day).

Gas flow time setting:

The timing for flowing zero gas in auto zero calibration is set.
Settable 60 to 599 seconds (in increments of 1 second)

Upper/lower limit alarm:

Alarm contact output turns on when the preset upper or lower limit alarm value is reached.
Contacts close when the instantaneous value of each component becomes larger than the upper alarm limit value or smaller than the lower alarm limit value.

Instrument error contact output:

Contacts close at occurrence of analyzer error No. 1, 3 or 10.

Calibration error contact output:

Contacts close at occurrence of manual or auto calibration error (any of errors No. 4 to 9).

Auto calibration status contact outputs:

Contacts close during auto calibration.

Pump ON/OFF contact output:

During measurement, this contact close. While calibration gas is flowing, this contact open. This contact is connected in power supply of pump, and stop the sample gas while calibration gas flowing.

Optional Functions**O₂ correction:**

Conversion of measured CO and SO₂ gas concentrations into values at standard O₂ concentration

$$\text{Correction formula: } C = \frac{21 - O_n}{21 - O_s} \times C_s$$

C : Sample gas concentration after O₂ correction

C_s : Measured concentration of sample gas

O_s : Measured O₂ concentration

O_n : Standard O₂ concentration (value changeable by setting)

*The upper limit value of the fractional part in this calculation is 4.

The result of calculation is indicated and output in an analog output signal.

Average value after O₂ correction and O₂ average value calculation:

The result of O₂ correction or instantaneous O₂ value can be output as an average value in the determined period of time.

Used for averaging is the moving average method in which sampling is carried out at intervals of 30 seconds.

(Output is updated every 30 seconds. It is the average value in the determined period of time just before the latest updating.)

Averaging time is settable within 1 to 59 minutes (in increments of 1 minute) or 1 to 4 hours (in increments of 1 hour).

Average value resetting:

The above-mentioned output of average value is started from the initial state by opening the average value resetting input terminals after short-circuiting for 1.5 seconds or longer.

Output is reset by short-circuiting and restarted by opening.

CO concentration peak count alarm:

(added only for CO/O₂ measurement)

Alarm output turns on according to the preset concentration and count.

Whenever the instantaneous value of CO exceeds the preset concentration value, count increments. If the count exceeds the preset value in one hour, the alarm contacts close.

Communication function:

RS-232C (9pins D-sub)

Half-duplex bit serial

Start-stop synchronization

Modbus™ protocol

Contents: Read/Wright parameters

Read measurement concentration and instrument status

Remark: When connecting via RS-485 interface, a RS-232C ↔ RS-485 converter should be used.

Performance

Repeatability : $\pm 0.5\%$ of full scale
Linearity : $\pm 1\%$ of full scale
Zero drift : $\pm 2\%$ of full scale/week
Span drift : $\pm 2\%$ of full scale/week
Response time :
(for 90% FS response)
 1 or 2 component measurement;
 Within 15 seconds including replacement
 time of sample gas
 More than 3 components measurement;
 Within 30 seconds including replacement
 time of sample gas

Interference from other gases:

Interference component	CO ₂ analyzer	CO analyzer	CH ₄ analyzer	SO ₂ analyzer	O ₂ analyzer
CO 1000ppm	$\leq 1\%FS$	—	$\leq 1\%FS$	$\leq 1\%FS$	—
CO ₂ 15%	—	$\leq 1\%FS$ (for 200ppm analyzer, $\leq 2.5\%FS$)	$\leq 1\%FS$	$\leq 1\%FS$	$\leq 2\%FS$
H ₂ O saturation at 20°C	$\leq 1\%FS$	$\leq 1\%FS$ (for 500ppm analyzer, $\leq 2.5\%FS$)	$\leq 1\%FS$	—	—
H ₂ O saturation at 2°C	—	$\leq 2.5\%FS$ (for 200ppm analyzer)	—	$\leq 5\%FS$	—

EC Directive Compliance

The product conforms to the requirements of the Low Voltage Directive 73/23/EEC and EMC directive 89/336/EEC (as amended by Directive 92/31/EEC), both as amended by Directive 93/68/EEC.

It conforms to following standards for product safety and electromagnetic compatibility ;

EN61010-1 : 2001 Safety requirements for electrical equipment for measurement, control and laboratory use.
 "Installation Category II"
 "Pollution Degree 2"
 EN61326-1 : 1997, A1: 1998, A2: 2001
 Electrical equipment for measurement, control and laboratory use — EMC requirements.

Standard Requirements for Sample Gas

Flow rate : 1L / min $\pm 0.5L$ / min
Temperature : 0 to 50°C
Pressure : 10 kPa or less (Gas outlet side should be open to the atmospheric air.)
Dust : 100 $\mu g/Nm^3$ or less in particle size of 0.3 μm or less
Mist : Unallowable
Moisture : Below a level where saturation occurs at room temperature (condensation unallowable).
 Below a level to cause saturation at 2°C for CO measurement with 0 to 200 ppm range and SO₂ measurement.

Corrosive component:

HCl 1 ppm or less

Standard gas for calibration:

Zero gas ; Dry N₂
 Span gas ; Each sample gas having concentration 90 to 100% of its measuring range (recommended).
 Gas beyond concentration 100% is unusable.

In case a zirconia O₂ analyzer is installed externally and calibration is carried out on the same calibration gas line:

Zero gas ; Dry air or atmospheric air
 Span gas ; For other than O₂ measurement, each sample gas having concentration 90 to 100% of its measuring range
 For O₂ measurement, O₂ gas of 1 to 2 vol%

Installation Requirements

- Indoor use (Select a place where the equipment does not receive direct sunlight, draft/rain or radiation from hot substances. If such a place cannot be found, a roof or cover should be prepared for protection.)
- Avoid a place where receives heavy vibration
- Select a place where atmospheric air is clean

Principle diagram of NDIR type measurement (For CO₂, CO, CH₄, SO₂)

Principle diagram of paramagnetic type measurement (For O₂)

Example configuration of sampling system including analyzer

(The above figure shows a general configuration example. Details may vary with sample gas. So contact Fuji Electric.)

<Code specification for ordering>

(1) Code symbols should be specified.

(2) Range combination should be the one allowed in separate tables.

(note1) " Y " should be specified when only O₂ measurement is necessary.

(note2) External O₂ sensor signal should be 0-1VDC linear of full scale, when " B " is specified at the 6th digit.
External zirconia O₂ sensor and external O₂ analyzer are not included in this order.

(note3) " C " should be specified when " Y " is specified at the 5th digit.

(note4) Allowable combinations of ranges are specified in the table (1) to (5) in page 8 and 9.

(note5) Allowed only for CO analyzer (syngle component analyzer only)

(note6) Allowed only for CO and CO₂ analyzers.

(note7) O₂ correction is carried out for CO and SO₂. At the same time, average value output after O₂ correction and O₂ average value output are added. Peak count alarm is carried out for CO.

(note8) " Y " should be specified when without O₂ measurement (when 6th digit is Y).

(note9) This analyzer has different calibration curve corresponding to sample gas composition.
When " B " or " Z " is specified at the 21th digit, the gas composition table should be issued.
"Standard" means N₂ balance adjustment.

(note10) " E " and " U " means in English indication, but differ in attached power supply cable (rating and plug type). Select according to operating power supply voltage.
The plug type of cable is "North American type" when " E " is specified, "European type" when " U " is specified.

SCOPE OF DELIVERY

Gas analyzer ... 1 unit

Power cable (standard inlet type 2m) ... 1 pc

Replacement fuse (250V, 1A AC, delay type) ... 2 pcs

Instruction manual ... 1 copy

Slide rail ... 2 pcs (when with slide rail is selected)

R	0 to 100%	—	—	—	○

○ : Built-in O₂ analyzer measurable range,

△ : External zirconia type O₂ analyzer measurable range

*O₂ analyzer is selectable indifferently to combination with other components.

External zirconia type O₂ analyzer is assumed to be Fuji s type ZFK.

Table 7: Channel No. — Indication, output component correspondence

Code symbol			Outputs corresponding to channels						
5th digit	6th digit	20th digit	CH1	CH2	CH3	CH4	CH5	CH6	CH7
Y	C	Y	O ₂						
A	Y	Y	SO ₂						
B	Y	Y	CO						
D	Y	Y	CO ₂						
E	Y	Y	CH ₄						
2	Y	Y	CO ₂	CO					
3	Y	Y	CH ₄	CO					
4	Y	Y	CO ₂	CH ₄					
5	Y	Y	CO ₂	CO	CH ₄				
A	A, B, C	Y	SO ₂	O ₂					
B	A, B, C	Y, B	CO	O ₂					
D	A, B, C	Y	CO ₂	O ₂					
E	A, B, C	Y	CH ₄	O ₂					
2	A, B, C	Y, B	CO ₂	CO	O ₂				
3	A, B, C	Y, B	CH ₄	CO	O ₂				
4	A, B, C	Y	CO ₂	CH ₄	O ₂				
5	A, B, C	Y, B	CO ₂	CO	CH ₄	O ₂			
A	A, B, C	A	SO ₂	O ₂	Correct SO ₂	Correct SO ₂ av.	O ₂ av.		
B	A, B, C	A, C	CO	O ₂	Correct CO	Correct CO av.	O ₂ av.		
2	A, B, C	A, C	CO ₂	CO	O ₂	Correct CO	Correct CO av.	O ₂ av.	
3	A, B, C	A, C	CH ₄	CO	O ₂	Correct CO	Correct CO av.	O ₂ av.	
5	A, B, C	A, C	CO ₂	CO	CH ₄	O ₂	Correct CO	Correct CO av.	O ₂ av.

* Study of table

When CH1 shows SO₂, it means that the display and the output of CH1 correspond to the component of SO₂.

The "correct" means O₂ correction.

The "av." means average value.

OUTLINE DIAGRAM (Unit : mm)

<UPPER>

<SIDE>

<FRONT>

<REAR>

OUTLINE DIAGRAM OF ACCESSORY SLIDE RAIL (Unit: mm)

Model : 305A-20/Accuride International Inc.

* The slide rails are attached to this equipment when designated.

19-inch rack mounting method:

The mass of the instrument should be supported at the bottom of the unit (or the side of the unit when mounted with the slide rails).

Also, for facilitate maintenance, a structure which allows extraction of the main unit by using the slide rail is recommended.

Slide rail mounted type

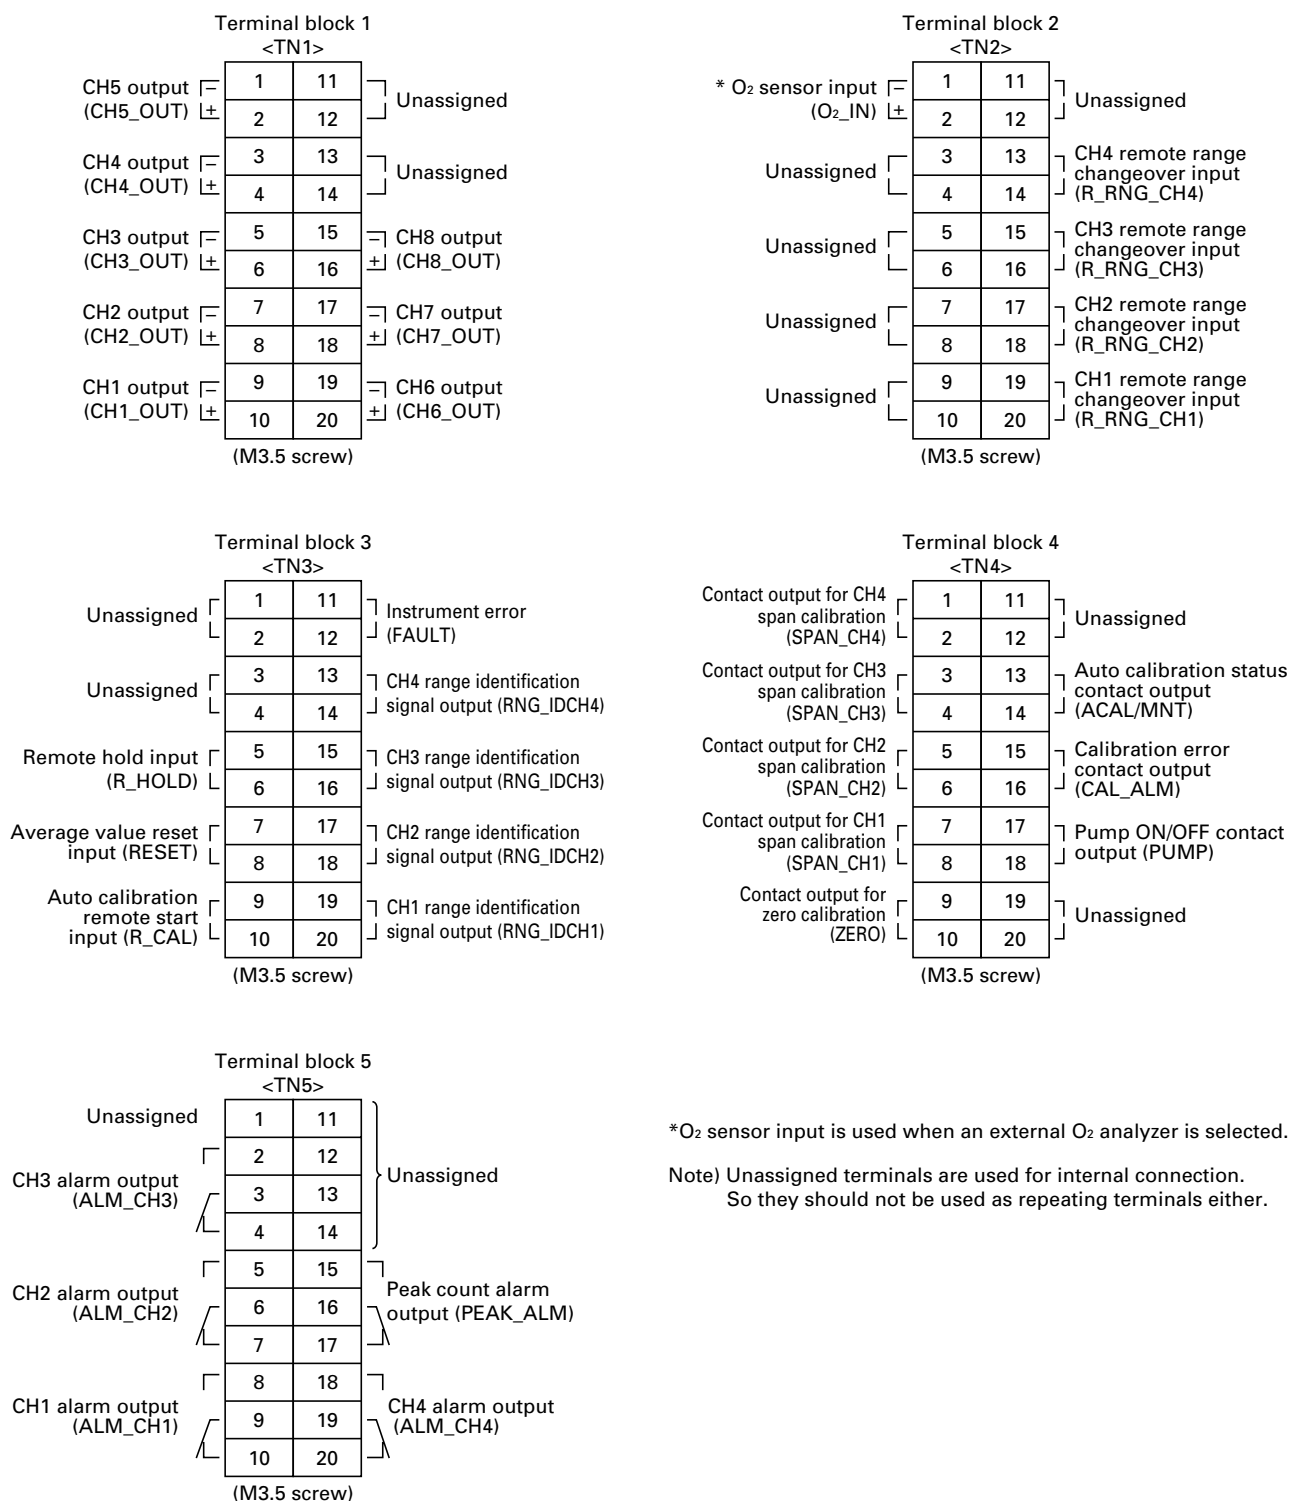

Guide rail mounted type

Guide rails

For the guide rail mounted type, a maintenance space (200mm or more) should be provided on the main unit.

EXTERNAL CONNECTION DIAGRAM

Exclusive Zirconia O₂ Sensor (to be purchased separately)

For O₂ correction, the gas analyzer ZRJ can accept linealized 0 to 1V DC signal coming from analyzer calibrated 0 to 25% O₂ full scale. If the analyzer is not available, Fuji can supply exclusive Zirconia O₂ sensor Model ZFK7.

Measuring method: Zirconia system

Measurable component and measuring range:

Measurable component		Minimum range	Maximum range
O ₂	Oxygen	0 to 5vol%	0 to 25vol%

Repeatability: Within $\pm 0.5\%$ of full scale
Linearity: Within $\pm 1\%$ of full scale
Zero drift: Within $\pm 1\%$ of full scale/week
Span drift: Within $\pm 2\%$ of full scale/week
Response time: Approx. 20 seconds (for 90% response)

Measured gas flow rate: $0.5 \pm 0.25\text{L / min}$

Remark: The Zirconia system, due to its principle, may produce a measuring error due to relative concentration versus the combustible O₂ gas concentration. Also, a corrosive gas (SO₂ of 250 ppm or more, etc.) may affect the life of the sensor.

Gas inlet/outlet size:

Rc¹/₄ or NPT¹/₄

Power supply: 90 to 126V AC or 200 to 240V AC, 50/60Hz

Enclosure: Steel casing, for indoor application

Indication: Temperature indication (LED)

Temperature alarm output:

Contact output 1a contact,
Contact capacity 220V, 1A AC (resistive load)

Outer dimensions (H x W x D):

140 x 170 x 190mm

Mass {weight}: Approx. 3kg

Finish color: Munsell 5Y 7/1
